nagendernss.work@gmail.com | +91 8058414184 | [LinkedIn](#)

Education

Indian Institute of Technology (BHU), Varanasi, B.Tech | CGPA: 8.21/10.0

2020 – 2024

Technical Skills

Programming Languages: Java, Python, Go, C++

Technologies: Spring Boot, REST API development, Microservices, LLM Agents, Tool Calling, Prompt Engineering, OpenAI, Azure & Anthropic SDKs, LLM Evaluations, e2b, ElevenLabs, Deepgram, LiveKit, AWS (SQS, SNS, Lambda), Kubernetes, MySQL, MongoDB, Redis, OpenSearch, Git/GitHub, Jenkins, Retool, Postman, Grafana, New Relic, Coralogix

Areas of Interest: Competitive programming, Data Structures, Algorithms, OOPS, DBMS

Professional Experience

Software Development Engineer - Plivo, Bangalore

Oct 2025 – Present

- **Built AI-Powered Debugging Agent:** Engineered an LLM agent (OpenAI/Anthropic SDKs with **tool calling**) that root-causes customer issues from a conversation ID, **masking all PII** before each LLM call, generating **OpenSearch queries** to fetch relevant logs, and synthesizing **root-cause summaries and fix steps** from prompt-injected service context; **adopted by 30+ people across engineering and support**, cutting triage from **a day to minutes**
- **Engineered Bring-Your-Own-Model Voice Agents:** Built **STREAM nodes** letting customers integrate their own **TTS, STT, and LLM** into voice and text conversation flows, architecting a **provider-agnostic backend** that integrates **ElevenLabs, Deepgram, and OpenAI/Claude** within the Plivo AI agent builder
- **Designed Real-Time Voicemail & Call-Screening Detection:** Developed a **real-time algorithm** on **LiveKit** that classifies **voicemail** and **call-screening** scenarios, **evaluating and tuning detection accuracy**, orchestrating screening-message playback, and handling **mid-screening pickup** for a seamless live-call handoff
- **Developed Human-Like Background Audio:** Built a **background audio** feature injecting configurable ambient background sound into live customer calls, making **AI-agent conversations** feel more human and less bot-like on support calls, **increasing call completion by 15%**
- **Drove Model Evaluation & Agent Tooling:** Ran **PTU throughput and cost evaluations** across **GPT-4o, GPT-5 mini, and GPT-4.1 mini** for model selection, and added a **custom-code execution** capability for agents, sandboxed via **e2b**

Software Development Engineer - Clear (formerly ClearTax), Bangalore

June 2024 – August 2025

- **Enhanced PDF Generation Service:** Fixed critical issues with **DSC (Digital Signature Certificate)** and password protection functionality in existing PDF generation service handling **2,500+ requests per minute** at peak traffic, and implemented **multi-language translation feature** for specific document fields from English to other languages in **high-performance distributed systems** environment with **zero downtime deployment**
- **Enhanced Revenue-Driving Auto-Renewal System:** Architected **microservices solution** for auto-renewal infrastructure supporting addon-based pricing models, implementing **cross-service API development** across licensing and order generation systems, directly contributing to **INR 20+ crores in revenue recovery**
- **Engineered Multi-Tenant API Platform:** Developed comprehensive **chatbot system** within **microservices architecture**, automated ticket generation through **API development**, and implemented **admin-only ticket visibility API** enabling workspace admins to view all tickets raised within their workspace while maintaining user-specific ticket access for regular users, ensuring proper **role-based access control** across the platform
- **Strengthened Enterprise-Grade Security & Compliance:** Enhanced existing **clear-util library** by creating an annotation that validates user cookies against a predefined whitelist stored in **service vault**, solving critical access control challenge by implementing **annotation-driven security** for restricting specific endpoint access to authorized users only, improving overall **system security posture** and **compliance standards**

Projects

URL Shortener - Backend Web Service

[GitHub Repository](#)

- Architected a **URL shortener service** with **Java, Spring Boot, MongoDB**, and **Thymeleaf**, featuring custom aliases, **click tracking**, expiration controls, and complete **Swagger/OpenAPI documentation** for interactive API testing
- Designed an optimized **database schema** with **MongoDB indexing** and **analytics aggregation** for efficient URL mapping, click event storage, and **real-time dashboard metrics**

Leadership Experience

Marketing Head, FMC Weekend – Film and Media Council, IIT BHU

Sep 2022 – Feb 2023

- Led marketing division for **India's Largest Digital Arts Fest**, managing **15+ team members** by matching tasks to individual strengths, securing **30 sponsors** through strategic outreach achieving **50% increase** from previous year

Competitive Programming Achievements

- **Global Rank 16** in CodeChef Snackdown 2021 | [CodeChef](#) 5 Star (Rating: 2026)
- **Global Rank 202** in Codeforces Round #797 among **19K+ participants** | [Codeforces](#) Specialist (Rating: 1595)
- **Global Rank 114** in LeetCode Biweekly Contest 112 among **30K+ participants** | [Leetcode](#) Knight (Rating: 2052)
